Exp No:03	TITLE: Registration form	Date:25/08/2022

WEB PAGE TO DESIGN REGISTRATION FORM

INTRODUCTION TO FORM AND CONTROLS:

The <form> element is a container for different types of input elements, such as: text fields, checkboxes, radio buttons, submit buttons, etc. The <label> element is useful for screen-reader users, because the screen-reader will read out loud the label when the user focus on the input element.

The <label> element also help users who have difficulty clicking on very small regions (such as radio buttons or checkboxes) - because when the user clicks the text within the <label> element, it toggles the radio button/checkbox.

The for attribute of the <label> tag should be equal to the id attribute of the <input> element to bind them together.

The <input> elements is useful to display the input control. We use text format in this experiment.

HTML TAGS:

- <form>: Defines an HTML form for user input.
- <input>: Defines an input control.
- <button>: Defines a clickable button.
- <label>: Defines a label for an <input> element.
- : Defines a section in a document.
